10. Stability and Reactivity

Reactivity Not available. Chemical stability Stable under normal storage/handling conditions. Possibility of hazardous reactions (Sodium azide) Decomposes on heating above 275°C. This produces toxic fumes. This generates fire and explosion hazard. Reacts with copper, lead, silver, mercury and carbon disulfide. This produces particularly shock-sensitive compounds. Reacts with acids. This produces toxic and explosive hydrogen azide. (ICSC 0950) (Potassium hydroxide) The solution in water is a strong base. It reacts violently with acid and is corrosive to metals such as aluminium, tin, lead and zinc. This produces a combustible/explosive gas

(hydrogen). Reacts with ammonium salts. This produces ammonia. This generates fire hazard.

Contact with moisture and water may generate heat. (ICSC 0357) Conditions to avoid Contact with incompatible materials. Contact with fire source. Incompatible materials Acids, Oxidizing agents, Copper, Lead, Silver, Mercury, Carbon disulfide, Metals, Ammonium salts Hazardous decomposition products Hydrogen azide, Hydrogen, Ammonia, Iodine compounds 11.
