## 10. Stability and Reactivity

### Reactivity

Not available.

### Chemical stability

Deliquescent material.

### Possibility of hazardous reactions

(Sodium hydroxide)

The solution in water is a strong base. It reacts violently with acid and is corrosive to metals such as aluminium, tin, lead and zinc. This produces a combustible/explosive gas (hydrogen). Reacts with ammonium salts. This produces ammonia. This generates fire hazard. Contact with moisture and water generates heat. (ICSC 0360)

### Conditions to avoid

Contact with incompatible materials.

Contact with fire source.

### Incompatible materials

Acids, Metals, Ammonium salts

### Hazardous decomposition products

Hydrogen, Ammonia, Copper oxides
