10. Stability and Reactivity

Chemical stability
Be unstable to air(oxygen). May be converted by the light.

Possibility of hazardous reactions

(Sodium hypochlorite)
Decomposes on heating and on contact with acids. Decomposes under the influence of light.
This produces toxic and corrosive gases including chlorine. The substance is a strong
oxidant. It reacts with combustible and reducing materials. The solution in water is a weak
base. Attacks many metals. (ICSC 0482)

Conditions to avoid

Contact with incompatible materials.
Contact with fire source.

Incompatible materials

Acids, Reducing agents, Combustible materials

Hazardous decomposition products Chlorine, Metallic oxide
